SEEDING COMBINATION

THREE
TASKS,
ONE PASS

Make every moment count with the seeder that does it all. Engineered with high-performance tech yet incredibly easy to use, Kubota's SC Series cultivates, fertilises and seeds in a single pass. And with precision farming at your fingertips, it's set to take your productivity to the next level.

KUBOTA SC SERIES

Seed and fertiliser 60/40 split hopper.

Excellent depth control from within the cabin with high working speeds.

ISOBUS iM Tellus and Tellus GO universal terminals put precision farming at your fingertips.

Working procedures easily monitored from the safety of the tractor cabin.

Available in 3m, 4m and 6m working widths.

Seeds, fertilises and cultivates in a single pass.

ISOBUS COMPATIBLE

Precision farming makes mechanical work smart, efficient and easy. With the ISOBUS technology your implements are better connected, operated, controlled and monitored. Your needs and demands drive Kubota's precision farming solutions.

COMPACT DISCS

THE BEST START
FOR YOUR SOIL

CD2350 COMPACT DISC & SH200E SEED BOX

KUBOTA CD SERIES

Robust disc arms and high capacity bearings deliver excellent durability.

Maintenance-free bearings.

Choice of 2 rollers.

Actipack roller for clod crushing and very firm re-compaction of the soil.

Easily adapted for heavy and sticky soil conditions.

Cage roller may be selected for a more economical option.

SH Box is the ideal factory fit seeding option.

Conical shaped hardened disc ensures constant cutting angle independently of the disc diameter with extra long wear life.

Available from 2.0m to 7.0m working width.

CD BEARING HUB

CD DISC DESIGN

CD2600T

When it comes to seed germination, balance is key. Kubota's versatile CD Series enable both shallow and deep cultivation with the right mixture and quantity of straw and residue, ensuring good penetration, cutting quality and output, while keeping adjustments simple and maintenance costs low.

SH SEED BOX ATTACHMENT

CD2500F

DISC SPREADERS

EVEN SPREAD,
EVEN BETTER
RESULTS

DSXL-W GEOSPREAD

KUBOTA DS SERIES

Full section control available on the GEOSPREAD models using 1m section widths.

4 load cells (5 tonne per cell) and centralised reference sensor deliver unrivalled dosing accuracy.

Easy setting of application rate for up to 54m spreading width.

For small to large scale farm operations.

Accurate and consistent spreading pattern.

Capacity ranges from 700L to 4,575L.

ISOBUS COMPATIBLE

Precision farming makes mechanical work smart, efficient and easy.

With the ISOBUS technology your implements are better connected, operated, controlled and monitored.

Your needs and demands drive Kubota's precision farming solutions.

DSX-W GEOSPREAD

With MULTIRATE the DSX-W GEOSPREAD can do high speed spreading in combination with variable rate application per section.

DSC (COMPACT)

DSC (COMPACT)

Hydraulically controlled hopper shutter with spreading widths up to 21m.

Includes all Disc Spreader range features, despite being the most compact model.

4 spreading vanes are easily detachable for static calibration tests.

Easily access and adjust the application rate.

DSM (MEDIUM)

DSM (MEDIUM)

Includes Kubota Rotorflow system with 8 vanes per disc, and can spread up to 28m.

Compatible with larger spreader accessories, such as the aluminium hopper extensions and TrimFlow border spreading system.

DSX (EXTRA LARGE)

DSX (EXTRA LARGE)

Capable of a maximum 54m spreading width with up to 4,575L capacity.

Driving speed stays constant with dual PTO input shafts. Combined with 'slow rotating' agitator system, the DSX is capable of operating with high disc speeds to ensure a very even spreading pattern.

DSX-W GEOSPREAD models come standard with central hydraulic drive.

HIGH SPEED SEEDING

KUBOTA PP SERIES

For all tillage and row crop establishment methods, Kubota offers proven technology.

Today precision farming has become more and more important. With GEOcontrol and GEOseed®, Kubota offers two applications for the PP Series that maximise the machine output and prevent double seeding.

The PP Series is available with working widths from 3m to 6m with flexible adjustable row widths and a wide range of additional equipment.

Up to 18km/h working speeds with the NEW SX High Speed Planter.

HD-II VACUUM SOWING ROW FOR PRECISE SEED SINGULATION

SX HIGH SPEED SOWING ROW WITH SOWING SPEEDS UP TO 18KM/H

KUBOTA VP SERIES

Versatile, precise and economic vacuum planter.

Guarantees customised precision sowing for all sorts of vegetable seeds.

The ultimate machine for vegetable producers.

Available rigid or as a parallel hydraulic folding model.

2m to 6.5m working widths.

Almost 1700 different build configurations possible.

EC TRAILED MOWERS - ECTC 320 CRS

EC TRAILED MOWERS

Trailed Mowers from 2.8m to 6.2m.

New ECTC & ECTS (Trailed Centre & Side) mower range available in V-tine conditioner, rubber and M-Roll steel roller conditioner.

ECTS360CR/S and ECTS360CV available with a wide working width of 3.6m.

SMARTCUT CUTTERBAR SYSTEM

SAFECUT SHEAR PIN

Disc impact protection system standard across all Krone mowers.

When the disc hits an obstacle, the roll pin breaks and the disc spins up on the threaded drive shaft, moving out of the way of the next disc, which continues to spin without damage.

ECB & ECF MOWER RANGE

Triple Combination Mowers from 8.7m to 10.1m.

M-Roll super conditioner for ECB1000CR mowers.

Large range of ECB and ECF mowers with new M-Roll steel super conditioner / rubber / V-tine / no conditioner and with or without cross conveyor for ECB mowers.

High output rates and heavy construction for massively efficient mowing.

Front mounted mowers from 3.2m to 3.6m, with swath boards for narrow windrow on roller conditioner mowers.

SMARTCUT CUTTERBAR

Krone's SmartCut cutterbar features lifetime oil filling.

Krone's fully welded one piece construction gives exceptional resilience.

Satellite gears are a Krone development, featuring massive spur gears to ensure positive mesh, slow speed and efficient power transmission across every disc.

Increased overlap between discs ensures a clean cut and smooth crop flow.

EASYCUT TRAILED CENTRE 4M & 5M

Widest conditioner rollers in the industry.

Optional 3m transport kit means you can switch from field to road position without leaving the cab for easy travel.

4 conditioning systems available – non-conditioner, V-flail conditioner, rubber and steel roller conditioners.

Steel conditioner design comes from North America (not an M-Roll), however, conditions very well in Australian high crop conditions.

AM-R MOWER RANGE

Working width from 2.4m to 3.6m.

Quick change blades.

Heavy headstock and blade box.

Driven by drive shaft – no belts.

ECR MOWER RANGE

Work widths 2.8m to 4.0m w/o conditioner 2.8m and 3.2m conditioner models with new M-Roll, rubber rollers or V-tine conditioner.

The world's best constructed linkage mower for Australia's tough conditions.

DuoGrip Centre of Gravity Suspension System suspends the mower in its centre of gravity, guiding with two arms to maintain a uniform ground pressure across the entire working width.

EASYCUT TRAILED CENTRE - ECTC 400/500 WITH OPTIONAL TRANSPORT KIT

SQUARE BALERS

THE BIG PACK
IS SQUARED UP
FOR SUCCESS

1.9% FINANCE
PA UP TO 60 MONTHS*

ACROSS THE KRONE RANGE

BP1290 HDP II

HDP II SQUARE BALER

Krone has set a new benchmark in large square bale production with the HDP II, with a world first: the development of a unique 8-knotter system.

The Krone HDP II can produce up to 90% higher throughputs or up to 10% more density at the same ground speed than our original HDP.

The Variable Fill System (VFS), unique to Krone, offers the highest throughput, 5-phase feed sequence for the bale chamber, offering rock-solid and well formed bales, even in small windrows.

Twine boxes fold down hydraulically for easy refilling of twine.

MULTIBALE BALER

Using a divided needle carrier, the 870HDP MultiBale can produce one rock-hard bale or up to 8 small bales with 2 strings per bale, bundled together with 3 strings around the large bale.

Bale, handle and haul with the ease of large square bales, then cut three strings to utilise small bales for use at a stock feed trader, horse or hobby farm.

In the case of an overload, the fully sealed and lubricated cam type clutch will disengage. Reducing throttle speed will clear the blockage and the cam clutch re-engages without stoppages or shear pin replacement.

HIGH SPEED BALER

Standard models High Density Press (HDP) and HDP Xtreme models available, which will continue in the range.

Using the heaviest of components throughout the machine, the HighSpeed range impresses every experienced baler operator with its productivity and technical sophistication.

The HighSpeed range produces the best shaped and densest bales on the market.

HDP Xtreme model is standard with auto lube system. It greases the complete VFS pre-chamber and replaceable wear liners for the bale chamber directly behind the plunger area. Other features are in line with our HDP HighSpeed.

For all Krone parts ordered on a Machine Down order type and sourced ex Germany, we will now be using a DHL service called Time Definite with a 5-day delivery door-to-door (subject to airline/customs delays).

HEAVIEST FLYWHEEL

BP1290 HDP XTREME WITH BALECOLLECT

BALECOLLECT 1230

Bale accumulator collects and deposits up to 4 bales with fully integrated scales.

Up to five different strategies - the BaleCollect can deposit 4, 3, 2 or 1 bale.

Transports like a trailer at 50km/h under 3m transport.

STANDARD ON ALL BIG PACKS

Fully automatic clutches. If blocked, it will idle down and unblock itself.

Heaviest flywheels for smooth operation and productivity.

Standard weight scales.

Tandem steering axle with radial tyres.

Hydraulic soft start available.

Other features include hydraulic jacks, electric bale length adjustment and LED lights.

POWER FEED ROLLER

BP870 HDP XC MULTIBALE

*Offer is available for business borrowers only. This 1.90% p.a. finance rate offer is only available with a minimum 20% deposit, 60 monthly repayments and minimum financed amount of \$4,000. Terms, conditions, fees, charges and credit criteria apply. Different term and different deposit may result in a different rate. Credit provided by Kubota Australia Pty Ltd ABN 72005300621. This finance offer is available until 30/04/21 with finance application submitted by 31/05/21 and applies to new Krone models.

NEW BIG PACK 5TH GENERATION

Introducing the all new Big Pack 5th generation range with 6 knotters. These square balers have been tested in Australian conditions and have the same strong performance levels and so much more than our HDP High Speed and Xtreme balers. The new machines are fully available for 2021 alongside the existing range of Big Pack 6 knotter High Speed and Xtreme, which stay in the range long term and then there are the legendary HDP II balers.

The new Big Pack range has improved comfort of operation and reduced cost of ownership, while still maintaining the key attributes of the Big Pack. These include amazing productivity, bale shape and density, reliability with the use of the strongest components, camless pick-up, VFS packer system with auto reset, 600kg flywheels for smooth operation and soft start.

NEW

1 KNOTTER FAN SYSTEM

New PowerClean knotter fan system with positive pressure, for the cleanest machine up the top and down the sides of the machine.

Close to 100% clean machine as the air stream is running to all key areas of the baler to simply keep it clean.

2 TWINE BOX

The new twine box folds down in two modes hydraulically.

First mode: Complete door folds down, same as the HDP II design.

Second Mode: The twine box stays on the machine and folds upright hydraulically.

Twine box door is integrated into the twine box for no accumulation of debris up the top and inside the twine box. New twine spools available up to 15kg, which can be stored.

3 VFS - VARIABLE FILL SYSTEM

Larger HDP II VFS bearings and cam track.

Split inner cam track, easier to change.

Design goal was the reduction of running costs.

Redesigned VFS clutch triggering system, which allows the operator to adjust the biscuit from the cabin.

The most gentle pre packer system which allows you to bale longer with the best top to bottom bale filling.

4 BALE CHAMBER

Just like on our HDP Xtreme, the new HDP version of the machines have the standard chamber wear liners and extra auto greasing inside the VFS.

New split bale ejector to be able to eject the last bale only or alternatively empty the full chamber.

OTHER FEATURES

Central crank adjustment for crop roller height.

Open rear of the pick-up for improved clean out and to not remove pick-up covers.

New VC VariCut cutting unit, now belt driven like HDP II.

New enclosed knotter trip gearbox.

New rear mounting frame for extra twine boxes and inoculant tank.

New moisture sensor with improved accuracy and many more updates to improve customer satisfaction.
